ArroChem's ArroWorks Calcium Scale Remover can be diluted by adding 25 gallons of scale remover per 100 gallons of water. (20% solution) The solution should then be heated to 170°F and allowed to circulate around the scaled surface for 4 hours or until the scale is gone. Necessary dwell time varies depending on the amount of scale. This product is not effective for removing polymer scale.

*As conditions may vary, all dosages and guidelines are merely suggested starting points. It is recommended the user determine the proper operating conditions for their system.
